Keynote Remote For Mac

Just upgraded to iOS 11 2 5 on my iPhone and iPad and find that it no longer supports Bluetooth between iOS devices.. Thanks Apple! I'd be grateful for any suggestions or third party products which might help?.. Not only does it turn the pages but it also shows the speaker notes - invaluable.. In places with no wifi or no cellular connection (and I seem to find quite a lot!), I've been able to rely on Bluetooth to link phone and iPad - but not anymore.. Apple support confirm this For years I've been using Keynote remote on my iPhone to control Keynote presentations on my iPad.
